1) Please provide internal photo's of the control box.

Internal photos rev 2 filed, containing internal photos of control box.

2) The RMS measurements are made with a 1 mS integration time. Indicate how this was accomplished. For example, what was the number of bins and sweep time of the analyzer during the RMS measurements.

To accomplish an integration time of less or equal to 1ms, the spectrum analyzer was set up with the following values.

Sweep time: 500ms

Number of pixels/bins/presentation values per sweep: 500
