FCC ID: OR8-MAESTRO

FCC Requirement

According to KDB 447498 D01 Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies V05R02

(1) Clause 4.3: General SAR test reduction and exclusion guidance

Sub clause 4.31: Standalone SAR test exclusion considerations

1) The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6GHz at test separation distance≤50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation, mm)]*[$\sqrt{f_{(GHz)}}$] \leq 3.0 for 1-g SAR

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation, mm)]*[$\sqrt{f_{(GHz)}}$] \leq 7.5.0 for 10-g SAR

Calculation:

The maximum tune-up power is1.435mW @2.440GHz Separation Distance is 5mm

For 1-g SAR Result: $(1.435 \text{mW} / 5 \text{mm}) \cdot [\sqrt{2.440} (\text{GHz})] = 0.448 < 3.0 \text{ for 1-g SAR}$

So standalone SAR measurements are not required.
