| 15.247(b) (4) requirement: | | | |
| The conducted output powe | r limit specified in paragraph (b) of this section is based on the use of | | |
| antennas with directional ga | ins that do not exceed 6 dBi. Except as shown in paragraph (c) of this | | |
| section, if transmitting anter | nas of directional gain greater than 6 dBi are used, the conducted output | | |
| power from the intentional ra | adiator shall be reduced below the stated values in paragraphs (b)(1), | | |
| (b)(2), and (b)(3) of this sec | tion, as appropriate, by the amount in dB that the directional gain of the | | |
| antenna exceeds 6 dBi. | | | |
| EUT Antenna: | | | |

The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded. 3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. | Test Requirement: | 47 CFR Part 15C Section 15.247 (d) | | | | | |
|------------------------|---|--|--|--|--|--|
| Test Method: | ANSI C63.10:2013 | | | | | |
| Test Setup: | Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane Remark: Offset=cable loss+ attenuation factor. | | | | | |
| Limit: | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. | | | | | |
| Exploratory Test Mode: | Hopping and Non-hopping transmitting with all kind of modulation and all kind of data type | | | | | |
| Final Test Mode: | Only the worst case is recorded in the report. | | | | | |
| Test Results: | Pass | | | | | |

| Exploratory Test Mode: | Non-hopping transmitting with all kind of modulation and all kind of data type |
| Final Test Mode: | Through Pre-scan, find the DH5 of data type is the worst case of GFSK modulation type, 2-DH5 of data type is the worst case of π /4DQPSK modulation type, 3-DH5 of data type is the worst case of 8DPSK modulation type. |
