Limited Modular Approval Request

FCC ID: 2ASVZ-01

The following attestation addresses the requirements to support modular approval:

Modular approval requirement	Yes (provide brief statement)	No *
(a) The radio elements must have the radio frequency circuitry shielded. Physical components and tuning capacitor(s) may be located external to the shield, but must be on the module assembly		Does not comply. There is no capability to shield the RF circuitry. It is located solely within the Integrated Circuit. See below.
(b) The module must have buffered modulation/data inputs to ensure that the device will comply with Part 15 requirements with any type of input signal	Complies. There is no support for external modulation. All modulation is performed within the RFIC.	
(c) The module must contain power supply regulation on the module	Complies. The module is supplied with unregulated 4-6 VDC, and contains regulators to step down to 3.3 V, 1.8 V, and 1.2 V.	
(d) The module must contain a permanently attached antenna, or contain a unique antenna connector, and be marketed and operated only with specific antenna(s), per Sections 15.203, 15.204(b), 15.204(c), 15.212(a), 2.929(b)	Complies. There is no support for an external antenna. The antenna is etched on the PCB and has a fixed gain of 4 dBi for each of the 3 transmitters.	
(e) The module must demonstrate compliance in a stand-alone configuration		Does not comply. The module was tested within a representative host RS-1843AOPC
(f) The module must be labelled with its permanently affixed FCC ID label, or use an electronic display (See KDB Publication 784748 about labelling requirements)	Complies. The label will be attached as shown below.	
(g) The module must comply with all specific rules applicable to the transmitter. The grantee must provide comprehensive instructions to explain compliance requirements	Complies. A user guide will be provided.

Modular approval requirement	Yes (provide brief statement)	No *
(h) The module must comply with RF exposure requirements	Complies.	

* Please provide a detailed explanation if the answer is "No."

Here is a detailed explanation of the shielding non-compliance:

a) The radio elements shall have the radio frequency circuitry shielded. Physical / discrete and tuning capacitors may be located external to the shield, but must be on the module assembly.

Does not comply. There is no capability to shield the RF circuitry. It is located solely within the Integrated Circuit. Please see a rendering of the board below. There no room for a shield, and no active RF components other than the RFIC.

This module is not sold separately, and is not installed in any hosts except for D3 hosts, and in case where the module will be integrated in other non-identical hosts in the future, we will expand the LMA to include the new hosts after an appropriate assessment to the FCC rules.
