

BNetzA-CAB-02/21-102

Maximum Permissible Exposure (MPE) & Exposure evaluation

Report identification number: 1-7426/18-07-05 MPE (FCC)

Certification numbers and labeling requirements				
FCC ID	2ASKB-HIRES55V3P1			

This report is electronically signed and valid without handwriting signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

Document authorised:

Lab Manager Radio Communications & EMC	Testing Manager Radio Communications & EMC

Report no.: 1-7426/18-07-05

EUT technologies:

Technologies: Max. power measured EIRP [dBm]		EIRP declared by customer	
77 GHz VRD	16.11	20 dBm	

NOTE: Test results taken from CTC Advanced report 1-7426/18-07-02

Prediction of MPE limit at given distance - FCC

Equation from page 18 of OET Bulletin 65, Edition 97-01

 $S = PG / 4\pi R^2$

where: S = Power density

P = Power input to the antenna

G = Antenna gain

R = Distance to the center of radiation of the antenna

PG = Output Power including antenna gain

The table below is excerpted from Table 1B of 47 CFR 1.1310 titled "Limits for Maximum Permissible Exposure (MPE), Limits for General Population/Uncontrolled Exposure"

Frequency Range (MHz)	Power Density (mW/cm ²)	Averaging Time (minutes)	
300 -1500	f/1500	30	
1500 - 100000	1.0	30	

where f = Frequency (MHz)

Prediction: worst case

	Technologies:	VRD	
	Frequency (MHz)	77000	
PG	Declared max power (EIRP)	20	dBm
R	Distance	20	cm
S	MPE limit for uncontrolled exposure	1	mW/cm ²
	Calculated Power density:	0.0199	mW/cm ²
	Calculated percentage of Limit:	1.99%	

This prediction demonstrates the following:

The power density levels for FCC at a distance of 20 cm are below the maximum levels allowed by regulations.
