To whom it may concern,

Subject – Attestation of software used in Part 90Y Class 3 Permissive Change submission for FCC ID: QWP-45700.

Cambium Networks confirm that: -

During certification test the PTP 700 uses internal development software which is identified as Bxxx-MACDSP-G7FED, where xxx is a unique reference number; this development software is the building block for the final released software as any new development such as support for additional frequency bands or changes which are seen to be beneficial are carried forward into the next software version. On completion of certification test and internal System Integration Test this software will be released to customers with a customer facing traceable identification reference “700-XX-YY”, where XX is the Major version and YY is the Minor version, e.g. “700-01-00” would be the first release of a major software version and “700-01-01” would be a minor modification to the major software release.

Note: the decision to increment the “major” version is determined by marketing considerations, and does not indicate the need for permissive Class change.

Software Version declared in Part 90Y test: -

- B075- MACDSP-G7FED

We further state that there has been no change to the Software, Distribution and Security Documentation to support this submission.

Yours sincerely

Donald W Reid
