# 3 Test Summary

Test Item	FCC Test Requirement	Test Method	Result
Antenna Requirement	47 CFR Part 15, Subpart C Section 15.203	ANSI C63.10 2013	Pass
Conducted Emission (150KHz to 30MHz)	47 CFR Part 15, Subpart C Section 15.207	ANSI C63.10 2013	N/A
Electric Field Strength of Fundamental and Outside the Allocated bands	47 CFR Part 15, Subpart C Section 15.225(a)/(b)/(c)	ANSI C63.10 2013	Pass
Radiated Emission	47 CFR Part 15, Subpart C Section 15.225(d)/15.209	ANSI C63.10 2013	Pass
Frequency Tolerance	47 CFR Part 15, Subpart C Section 15.225(e)	ANSI C63.10 2013	Pass
20dB Occupied Bandwidth	47 CFR Part 15, Subpart C Section 15.215	ANSI C63.10 2013	Pass

N/A:Only battery supply is supported and this item is not considered. Remark:

Company Name and Address shown on Report, the sample(s) and sample Information was/ were provided by the applicant who should be responsible for the authenticity which CTI hasn't verified.

Model No.: EP-0400, EP-04XXXXXXX (where X = 0-9, a-z, A-Z, "-", or blank for marketing purpose) Only the model EP-0400 was tested. They have same electrical, PCB and layout, only the model names are

different for marketing requirements.

# 4 General Information

# 4.1 Client Information

Applicant:	Qbic Technology Co., Ltd.
Address of Applicant:	26 F12, No. 99, Sec. 1, Xintai 5th Rd., Xizhi Dist., New Taipei City 221416, Taiwan, China
Manufacturer:	Qbic Technology Co., Ltd.
Address of Manufacturer:	26 F12, No. 99, Sec. 1, Xintai 5th Rd., Xizhi Dist., New Taipei City 221416, Taiwan, China
Factory 1:	Jiangxi Xingtai Technology Inc.
Address of Factory 1:	Jizhou District industrial park, Ji'an, Jiangxi, China
Factory 2:	Qbic Technology Co., Ltd.
Address of Factory 2:	26 F10, No. 99, Sec. 1, Xintai 5th Rd., Xizhi Dist., New Taipei City 221416, Taiwan, China
Factory 3:	Lih Rong Electronic Enterprise Co., Ltd.
Address of Factory 3:	No. 486, Sec. 1, Wanshou Rd., Guishan Dist., Taoyuan City 333026, Taiwan, China
Factory 4:	Lih Rong Electronic Enterprise Co., Ltd
Address of Factory 4:	No. 1, Gaoxia Rd., Zhongli Dist., Taoyuan City 320030, Taiwan, China

# 4.2 General Description of EUT

	Product Name:	ePaper
	Model No.(EUT):	EP-0400, EP-04XXXXXXX (where X = 0-9, a-z, A-Z, "-", or blank for marketing purpose)
	Test Model No.:	EP-0400
	Trade Mark:	Qbic
	Product Type:	Mobile Portable
	<b>Operation Frequency:</b>	13.56MHz
	Modulation Type:	ASK
	Antenna Type:	PCB antenna
	Power Supply:	DC 3.0V
)	Test Voltage:	DC 3.0V
/	Sample Received Date:	Apr. 19, 2023
	Sample tested Date:	Apr. 19, 2023 to May 12, 2023

Report No. : EED32P80	0539203 Page 11 of 24
	<ul> <li>ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</li> <li>7. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, only the test worst case mode is recorded in the report.</li> </ul>
Test Mode:	Transmitting with ASK modulation.
Test Result:	Pass

#### Remark:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Factor= Antenna Factor + Cable Factor - Preamplifier Factor,

Level = Read Level + Factor,

Over Limit=Level-Limit Line.

#### Report No. : EED32P80539203

Measurement Data

X axis positioning 9kHz – 150KHz:

#### Remark:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic

equation with a sample calculation is as follows:

Factor= Antenna Factor + Cable Factor - Preamplifier Factor,

Level = Read Level + Factor,

Over Limit=Level-Limit Line.

#### Remark:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic

equation with a sample calculation is as follows:

Factor= Antenna Factor + Cable Factor - Preamplifier Factor,

Level = Read Level + Factor,

Over Limit=Level-Limit Line.

#### Remark:

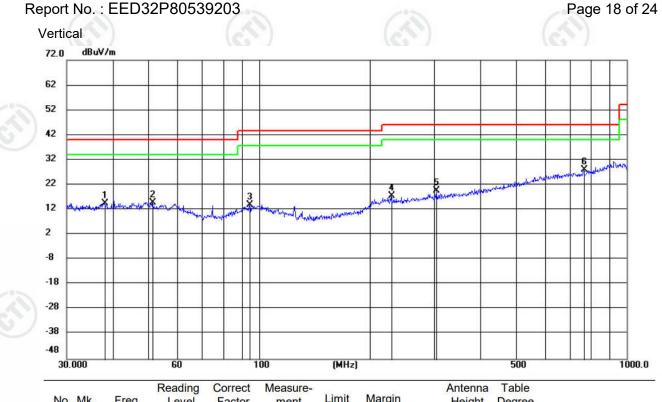

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic

equation with a sample calculation is as follows:

Factor= Antenna Factor + Cable Factor – Preamplifier Factor,

Level = Read Level + Factor, Over Limit=Level-Limit Line.

١	lo. Mk	Freq.	Reading Level	Correct Factor	Measure- ment	Limit	Margin		Antenna Height	Table Degree

### 5.4 Frequency Stability **Test Requirement:** 47 CFR Part 15 C Section 15.225(e) **Test Method:** ANSI C63.10: 2013 **Test Setup:** Thermal Chamber Coil Antenna Spectrum EUT Analyzer **Frequency Range:** Operation within the band 13.110-14.010 MHz **Requirements:** The frequency tolerance of the carrier signal shall be maintained within +/- 0.01% of the operating frequency over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery. Method of Measurement: The EUT was placed in an environmental test chamber and powered such that control element received normal voltage and the transmitter provided maximum RF output. **Test Result:** The unit does meet the FCC Part 15 C Section 15.225(e) requirements.

# 5.5 20dB Occupied Bandwidth

	Test Requirement:	47 CFR Part 15 C Section 15.215 (C)					
	Test Method:	ANSI C63.10: 2013					
3	Test Setup:	Coil Antenna EUT Spectrum Analyzer					
	Frequency Range:	Operation within the band 13.110 – 14.010 MHz					
	Requirements:	Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §15.217 through §15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission is contained within the frequency band designated in the rule section under which the equipment is operated. The requirement to contain the 20 dB bandwidth of the emission within the specified frequency band includes the effects from frequency sweeping, frequency hopping and other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage. If frequency stability is not specified in the regulations, it is recommended that the fundamental emission be kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation.					
3	Limit:	For 13.56 MHz the permitted frequency band is 14kHz, so the limit is 11.2 kHz.					

#### Test Data:

20dB bandwidth (Hz)	FL (MHz)	FH (MHz)	Limit(MHz)	Result
304.0	13.559928	13.560232	13.110 – 14.010	Pass
