

Operational Description

FCC ID: CH8A90HS1058

Overall Description

Verizon One is an interactive device utilizing the power of PSTN and Broadband to deliver a feature rich and customer friendly service. This device will have all the standard features of a regular phone (Cordless Handset operating in the 5.8 GHz range , CID display, speakerphone, mute button, etc.) as well as an LCD display, and an integrated DSL modem and 802.11 WIFI router (to support connectivity to WiFi enabled devices throughout the home).

On top of the normal phone features, this device will deliver a suite of services via the LCD screen, including

- Proactive communications to guide DSL installation
- Access to online Address Book with ability to touch the screen and automatically dial a number
- Access to an online Calendar
- Email notification w/ header information
- Online Directory Searches – yellow and white page searches
- CallerID log and ability to incorporate this information into an online Address Book
- Real time call management
- Schedule and manage call forwarding events,
- Visual voice mail log, including name, number and time of message,
- Instant access to information services like weather, news, stock quotes, movie listings, etc.
