RE:

FCC ID: LJPKNW-1

I have a few comments on this Application.

1 On page 13 of the report the test lab uses a formula for calculating:

$ERP = Level + ET - ES + GainAnt$ . While the calculated values of ERP appear correct, and while this may be an appropriate formula to use to determine ERP, step b and c of the measurement procedure states the measured values of Et and Es are recorded. However, neither values have been given – only the result of the algebraic addition of the two. Please provide the values or at least a sample of Et and Es from the recorded measured values. Also, while the formula may be appropriate, the term “Level” is not defined. Again, while assumptions can be made about this value in the formula, assumptions cannot be made as to what the lab says these values are. Please provide an adequate explanation of the term “Level”.

2 The report Page 21 of 81, “Measurement Of Maximum Deviation”, appears incorrect. The last column is labeled MHz. Please correct this to show the proper designation.
