DFS Test Report

Equipment Under Test	Car Infotainment
Model Name	DGU-8745-Y400SA
Variant Model Name	DGU-8745-Y400SA-1, DGU-8745-Q200SA, DGU-8745-Q200SA-1
FCC ID	2AE77DGU8745Y400SA
Applicant	DIGEN CO., LTD.
Manufacturer	DIGEN CO., LTD.
Date of Test(s)	2017. 01. 23 ~ 2017. 02. 09
Date of Issue	2017. 02. 15

In the configuration tested, the EUT complied with the standards specified above.

(802.11a/n_HT20)

UNII-2A		UNII-2C	
CH.	Frequency(MHz)	CH.	Frequency(MHz)
54	5 270	102	5 510
62	5 310	110	5 550
		118	5 590

(802.11an_HT40)

UNII-2A		UNII-2C	
CH.	Frequency(MHz)	CH.	Frequency(MHz)
58	5 290	106	5 530
		122	5 610

(802.11an_VHT80)

2.4. Table for Test Modes

Preliminary tests were performed in different data rate to find the worst radiated emission. The data rate shown in the table below is the worst-case rate with respect to the specific test item. Investigation has been done on all the possible configurations for searching the worst cases. The following table is a list of the test modes shown in this test report.

Test Mode	Data rate (Worst case)
802.11a	6 Mbps
802.11an_HT20 802.11an_HT40 802.11ac_VHT80	MCS0

4. DFS(Dynamic Frequency Selection) test description

4.1. Applicability

The following table from KDB 905462 D02 v02 lists the applicable requirements for the DFS testing. The device evaluated in this report is considered a client device without radar detection capability

Requirement	Operational Mode				
	Master	Client Without Radar Detection	Client With Radar Detection		
Non-Occupancy Period	Yes	Not required	Yes		
DFS Detection Threshold	Yes	Not required	Yes		
Channel Availability Check Time	Yes	Not required	Not required		
U-NII Detection Bandwidth	Yes	Not required	Yes		

Requirement	Operational Mode		
	Master Device or Client with Radar Detection	Client Without Radar Detection	
DFS Detection Threshold	Yes	Not required	
Channel Closing Transmission Time	Yes	Yes	
Channel Move Time	Yes	Yes	
U-NII Detection Bandwidth	Yes	Not required	

Additional requirements for devices with	Master Device or Client with	Client Without Radar			
multiple bandwidth modes	Radar Detection	Detection			
U-NII Detection Bandwidth and Statistical	All BW modes must be tested	Not required			
Performance Check					
Channel Move Time and Channel Closing	Test using widest BW mode	Test using the widest			
Transmission Time	available	BW mode available for			
		the link			
All other tests	Any single BW mode	Not required			
Note: Frequencies selected for statistical performance check (Section 7.8.4) should include several					
frequencies within the radar detection bandwidth and frequencies near the edge of the radar					
detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of the					
bonded 20 MHz channels and the chan	nel center frequency.				

Table1.1 DFS During normal operation

4.2. Requirements

KDB 905462 D02 v02 the following are the requirements for Client Devices:

- a) A Client Device will not transmit before having received appropriate control signals from a Master Device.
- b) A Client Device will stop all its transmissions whenever instructed by a Master Device to which it is associated and will meet the Channel Move Time and Channel Closing Transmission Time requirements. The Client Device will not resume any transmissions until it has again received control signals from a Master Device.
- c) If a Client Device is performing In-Service Monitoring and detects a Radar Waveform above the DFS Detection Threshold, it will inform the Master Device. This is equivalent to the Master Device detecting the Radar Waveform and d) through f) of section 5.1.1 apply.
- d) Irrespective of Client Device or Master Device detection the Channel Move Time and Channel Closing Transmission Time requirements remain the same.
- e) The client test frequency must be monitored to ensure no transmission of any type has occurred for 30 minutes.

Note: If the client moves with the master, the device is considered compliant if nothing appears in the client non-occupancy period test. For devices that shutdown (rather than moving channels), no beacons should appear

Parameter	Value
Non-occupancy period	Minimum 30 minutes
Channel Availability Check Time	60 seconds
Channel Move Time	10 seconds
	See Note 1.
Channel Closing Transmission Time	200 milliseconds + an
	Aggregate of 60 milliseconds over remaining 10
	second period.
	See Notes 1 and 2.
U-NII Detection Bandwidth	Minimum 100% of the U-NII 99% transmission
	power bandwidth. See Note3.
Note 1: Channel Move Time and the Channel Closing	Transmission Time should be performed with Radar

Type 0. The measurement timing begins at the end of the Radar Type 0 burst. **Note 2:** The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (and aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate

duration of control signals will not count quiet periods in between transmissions. **Note 3:** During the U-NII Detection Bandwidth detection test, radar type 0 should the used. For each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

Table.1.2 DFS Response Requirement Values

4.3 Parameters of DFS Test Signals

As the EUT is a Client Device with no Radar Detection only Zero type radar pulse is required for the testing. Radar Pulse type 0 was used in the evaluation of the Client device for the purpose of measuring the channel Move Time and the Channel Closing Transmission Time.

Radar Type	Pulse Width (µsec)	PRI (µsec)	Number of Pulses	Minimum Percentage of Successful Detection	Mnimum Number of Trials
0	1	1428	18	See Note 1	See Note 1
1	1	Test A: 15 unique PRI values randomly selected from the list of 23 PRI values in Table 5a Test B: 15 unique PRI values randomly selected within the range of 518-3066 µsec, with a minimum increment of 1 µsec, excluding PRI values selected in Test A	Roundup: {(1/360)*(19*10 ⁶ PRI μsec)}	60%	30
2	1-5	150-230	23-29	60%	30
3	6-10	200-500	16-18	60%	30
4	11-20	200-500	12-16	60%	30
Aggregate	(Radar Types	5 1-4)		80%	120
Note 1: Sh	ort Pulse Rad	lar Type 0 should be used for	or the detection bandw	vidth test, channel 1	nove time, and

Note 1: Short Pulse Radar Type 0 should be used for the detection bandwidth test, channel move time, and channel closing time tests.

Table1.3 Short Pulse Radar Test Waveforms

Radar Type	Pulse Width (µsec)	Chirp Width (MHz)	PRI (µsec)	Pulses per Burst	Number of Bursts	Minimum Percentage of Successful Detection	Minimum Trials
5	50-100	5-20	1000- 2000	1-3	8-20	80%	30

Table1.4 Long	Pulse	Radar	Test	Waveform
---------------	-------	-------	------	----------

Radar Type	Pulse Width (µsec)	PRI (µsec)	Pulses Per Hop	Hopping Rate (kHz)	Hopping Sequence Length (msec)	Minimum Percentage of Successful Detection	Minimum Trials
6	1	333	9	0.333	300	70%	30

Table1.5 Frequency Hopping Radar Test Waveforms

4.4 Test Setup

Figure 1: Conducted Test Setup for DFS

Test procedure

KDB 905462 D02 v02 describes a radiated test setup and a conducted test setup. The conducted test setup was used for this testing. Figure 1 shows the typical test setup.

- 1. One frequency will be chosen from the Operating Channels of the UUT within the 5250 ~5350 Miz
 - or 5470 ~5725 $\,{\rm Mz}\,$ bands.
- 2. The Client Device (EUT) is setup per the diagram in Firure1 and communications between the Master device and the Client is established.
- 3. An MPEG or data file that is typical for the device is streamed from the Master to the Client to properly load the network.

4.5. Test result

Ambient temperature: $20 \degree$ C Relative humidity: 45% R.H.

Mode: 802.11a (UNII-2A) / *Client without Radar Detection* operating frequency: 5 300 账 Channel closing transmission time

Parameter	Test Result
Channel closing transmission time(C)	0.001 560 s
Channel move time	0.768 s

 $Page: (13) \quad of (14)$ The results shown in this test report refer only to the sample(s) tested unless otherwise stated. This test report cannot be reproduced, except in full, without the written approval of MOVON CORPORATION.

Mode: 802.11a (UNII-2C) / Client without Radar Detection operating frequency: 5 500 脸 Channel closing transmission time / Chan

Parameter	Test Result
Channel closing transmission time(C)	0.001 87 s
Channel move time	1.681 2 s

Note.

Dwell = S / B

where **Dwell** is the dwell time per spectrum analyzer sampling bin, **S** is the sweep time and **B** is the number of spectrum analyzer sampling bins.

An upper bound of the aggregate duration of the *Channel Closing Transmission Time* is calculated by: C = N * Dwell

where **C** is the Closing Time, **N** is the number of spectrum analyzer sampling bins showing a U-NII transmission and **Dwell** is the dwell time per bin.

Page : (14) of(14)

The results shown in this test report refer only to the sample(s) tested unless otherwise stated. This test report cannot be reproduced, except in full, without the written approval of MOVON CORPORATION.
