

Fig. A. Top view photograph of the Toshiba PC for **Configuration 1** of SAR testing. For this configuration, the cover with display screen is turned by 180° and folded back on the PC keyboard as for the PC tablet mode shown in Figs. 3-2 and 3-3 of the User's manual. Note that the underside of the keyboard is pressed against the base of the planar phantom for this configuration.

Fig. B. Side view photograph of the Toshiba PC for **Configuration 1** of SAR testing. Since the SAR was too low to measure whether the display screen was folded onto the keyboard as for the closed cover condition or pointed outwards as for the tablet mode, this Configuration 1 determines the SAR distribution when the PC is placed on the laptop or for the tablet mode when the PC is held in the forearm as in Fig. 3-3 of the User's manual.
