RE: FCC ID: AB6NT800MFRM
Attention: Thomas Wong

I have a few comments on this Application.

1 The PC2 request states that changes were made in the Transmitter Power Amplifiers from the OEM vendor. It is not clear from the documentation if this includes changes to "the basic frequency determining and stabilizing circuitry (including clock or data rates), frequency multiplication stages, basic modulator circuit or maximum power or field strength ratings." The power rating on the original grant is 60 watts, the power listed on this PC2 is 54 watts. This is only 0.5dBm but it must be remembered that the power on the original grant is what must be on the PC2.

2 The photos of the original equipment and the photos of the PC2 progression seems to show significant overall changes. The request for PC2 states that the design specifications of the PA are not changed, but please verify that the basic frequency determining and stabilizing circuitry (including clock or data rates), frequency multiplication stages, basic modulator circuit or maximum power or field strength ratings have not been modified.
