## Page 1 of 5 FCC ID: XQK-Y8-013D

# **Maximum Permissible Exposure Report**

## 1. Product Information

FCC ID : XQK-Y8-013D

EUT : Smart Visual Doorbell

Test Model : Y8-013D

Additional Model No. : Y9-013D, Y8-KP1, Y9-KP1, Y8-801D, Y9-801D, Y8T-013D, Y8U-013D,

Y9T-013D, Y9H-013D, Y9H-013D, Y9U-013D, T23, Y8, M8, Y9, X9

Model Declaration : PCB board, structure and internal of these model(s) are the same, So

no additional models were tested

Power Supply : Input: DC 5V, 1A

Battery: DC 3.7V, 800mAh

Hardware Version : /
Software Version : /

WIFI(2.4G Band)

Frequency Range : 2412MHz~2462MHz

Channel Number : 11 Channels for 20MHz bandwidth (2412~2462MHz)

7 Channels for 40MHz bandwidth (2422~2452MHz)

Channel Spacing : 5MHz

Modulation Type : IEEE 802.11b: DSSS (CCK, DQPSK, DBPSK)

IEEE 802.11g: OFDM (64QAM, 16QAM, QPSK, BPSK)
IEEE 802.11n: OFDM (64QAM, 16QAM, QPSK, BPSK)

Antenna Description : Internal Antenna, 1.79dBi(Max.)

433MHz Operation frequency : 433.92MHz

Modulation Type : ASK Channel Number : 1

Antenna Type : Internal Antenna Antenna Gain : 1.2dBi(Max)

Exposure category : General population/uncontrolled environment

EUT Type : Production Unit

Device Type : Mobile Device

Date of Test : November 07, 2024 ~ November 12, 2024

Date of Report : November 13, 2024

151 立河位测度份

#### 2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is ≤ 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

#### 3. Limit

#### 3. 1 Refer Evaluation Method

ANSI C95.1–2019: IEEE Standard for Safety Levels with Respect to Human Exposure to Electric, Magnetic, and Electromagnetic Fields, 0 Hz to 300 GHz

<u>FCC KDB publication 447498 D01 General 1 RF Exposure Guidance v06:</u> Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies.

FCC CFR 47 part1 1.1310: Radiofrequency radiation exposure limits.

FCC CFR 47 part2 2.1091: Radiofrequency radiation exposure evaluation: mobile devices.

#### 3. 2 Limit

Limits for Maximum Permissible Exposure (MPE)/Controlled Exposure

| Frequency      | Electric Field | Magnetic Field | Power Density          | Averaging Time |
|----------------|----------------|----------------|------------------------|----------------|
| Range(MHz)     | Strength(V/m)  | Strength(A/m)  | (mW/cm²)               | (minute)       |
|                |                |                |                        |                |
| 0.3 - 3.0      | 614            | 1.63           | (100) *                | 6              |
| 3.0 - 30       | 1842/f         | 4.89/f         | (900/f <sup>2</sup> )* | 6              |
| 30 – 300       | 61.4           | 0.163          | 1.0                    | 6              |
| 300 – 1500     | /              | /              | f/300                  | 6              |
| 1500 – 100,000 | /              | 1              | 5                      | 6              |

Limits for Maximum Permissible Exposure (MPE)/Uncontrolled Exposure

|                                               | Elimite for Maximum Fermiosiste Expedito (Mi E) encontrolled Expedito |                             |                |                        |                |  |  |  |  |

<sup>\*=</sup>Plane-wave equivalent power density

FCC ID: XQK-Y8-013D

4. MPE Calculation Method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01

 $S=PG/4\pi R^2$ 

Where: S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator

R=distance to the center of radiation of the antenna

## 5. Antenna Information

EUT can only use antennas certificated as follows provided by manufacturer;

| 201 dan only accountantial continuated ac follows provided by managed art. |                  |                   |              |                |  |  |  |  |  |

#### 8. Measurement Results

## 8.1 Standalone MPE Evaluation

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r =20cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

[2.4GWLAN]

|                   | Output power |         | Antenna | Antenna  | MPE      | MPE      |

#### Remark:

- 1. Output power including tune-up tolerance;
- 2. Output power was adjust to duty cycle at 100% if measured duty cycle less than 98%;
- 3. MPE evaluate distance is 20cm from user manual provide by manufacturer.

#### 8.2 Simultaneous Transmission MPE Evaluation

The EUT equiped with one 2.4GWIFI antenna and one 433.92 antenna. so need consider simultaneous transmission;

According to KDB447498 for Transmitters used in mobile exposure conditions for simultaneous transmission operations;

 $\sum \int of MPE ratios \leq 1.0$ 

| MPE<br>Antenna_WIFI<br>(mW/cm2) | MPE<br>Antenna_433.92<br>(mW/cm2) | ∑MPE<br>ratios | Limit | Results |
|---------------------------------|-----------------------------------|----------------|-------|---------|
| 0.0076                          | 0.000007                          | 0.0076007      | 1.0   | PASS    |

# 9. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.

-----THE END OF REPORT-----
