# TEST REPORT

Report number : Z071C-13393A1

Issue date : Nov. 7, 2014

The device, as described herewith, was tested pursuant to applicable test procedure and complies with the requirements of;

## FCC Part15 Subpart C

The test results are traceable to the international or national standards.

|                            |                       |
|----------------------------|-----------------------|
| Applicant                  | : KYOCERA Corporation |
| Equipment under test (EUT) | : Mobile Phone        |
| Model number               | : KYY08               |
| FCC ID                     | : JOYKYY08            |

Date of test : October 7,8,15-17, 2013  
November 7, 2014

Test place : TÜV SÜD Zacta Ltd. Yonezawa Testing Center  
4149-7 Hachimanpara 5-chome  
Yonezawa-shi Yamagata 992-1128 Japan  
Phone: +81-238-28-2880 Fax: +81-238-28-2888

Test results : Complied

Remarks : This report replaces test report No.Z071C-13393.

The results in this report are applicable only to the equipment tested.  
This report shall not be re-produced except in full without the written approval of TÜV SÜD Zacta Ltd.  
This test report must not be used by client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government.

Tested by : Chiaki Kanno  
Chiaki Kanno

Authorized by : Eiji Akiba  
Eiji Akiba  
Deputy General Manager of EMC Technical Department

## 1. Summary of Test

### 1.1 Purpose of test

It is the original test in order to verify conformance to FCC Part 15 Subpart C.  
The purpose of the test is additional test due to add the Bluetooth AFH mode.

### 1.2 Standards

CFR47 FCC Part 15 Subpart C

#### 1.2.1 Test Methods

ANSI C63.4-2009

#### 1.2.2 Deviation from standards

None

### 1.3 List of applied test to the EUT

| Test items Section            | Test items                                     | Condition             | Result |
|-------------------------------|--|-----------------------|--------|
| 15.247(a)(1)                  | 20dB Bandwidth                                 | Conducted             | PASS   |
| 15.247(a)(1)                  | Carrier Frequency Separation                   | Conducted             | PASS   |

| 26      | 2428            | 53      | 2455            |         |                 |

## 2.5 Description of Test mode

The EUT had been tested under operating condition.  
There are three channels have been tested as following:

| Tested Channel | Frequency [MHz] |
|----------------|-----------------|
| Low            | 2402            |
| Middle         | 2441            |
| High           | 2480            |

The pre-test has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates.

| Tested Channel    | Modulation Technology | Modulation Type | Packet Type |
|-------------------|-----------------------|-----------------|-------------|
| Low, Middle, High | FHSS                  | GFSK            | DH5         |
| Low, Middle, High | FHSS                  | 8-DPSK          | 3-DH5       |

The field strength of spurious emissions was measured at each position of all three axis X, Y and Z to compare the level, and the maximum noise.  
The worst emission was found in Z axis and the worst case recorded.

## 2.6 Operating mode

[Tx mode]

- i) Bluetooth test program setup to the DM tool
- ii) Select a test mode
  - Operating frequency:
    - No hopping (Channel Low: 2402MHz, Channel Middle: 2441MHz, Channel High: 2480MHz)
    - Hopping
  - Packet type: DH5, 3-DH5
- iii) Start test mode

[Rx mode]

- i) Bluetooth test program setup to the DM tool
- ii) Select a test mode
  - Operating frequency: Channel Low: 2402MHz, Channel Middle: 2441MHz, Channel High: 2480MHz
- iii) Start test mode

### 3. Configuration of equipment

#### 3.1 Equipment(s) used

| No. | Equipment         | Company | Model No. | Serial No.  | FCC ID / DoC | Comment |
|-----|-------------------|---------|-----------|-------------|--------------|---------|
| 1   | Mobile Phone      | KYOCERA | KYY08     | N/A         | JOYKYY08     | EUT     |
| 2   | AC Adapter        | KDDI    | 0203PQA   | HT-VLA      | -            | *       |
| 3   | Personal Computer | FUJITSU | FMVNC4DC3 | CP27202     | DoC          | -       |
| 4   | AC Adapter for PC | FUJITSU | ADP-602HA | CP281868-01 | -            | -       |

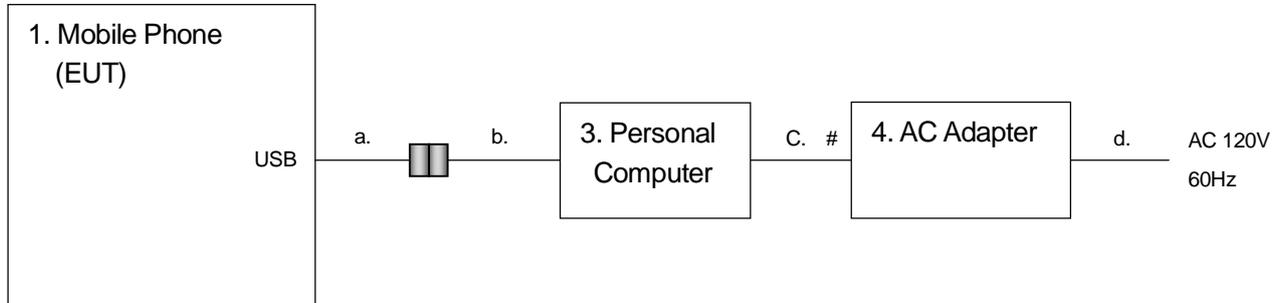

\*: AC power line Conducted Emission Test.

#### 3.2 Cable(s) used

| No. | Cable                           | Length[m] | Shield | Connector | Comment |
|-----|---------------------------------|-----------|--------|-----------|---------|
| a   | USB cable                       | 0.9       | Yes    | Metal     | -       |
| b   | USB cable                       | 2.0       | Yes    | Metal     | -       |
| c   | DC cable                        | 1.9       | No     | Plastic   | -       |
| d   | AC power cord for PC AC Adapter | 2.0       | No     | Plastic   | -       |

### 3.3 System configuration

[Radiated Emission and Antenna port Conducted Test]

 : Connector

# : Un-detachable cable

Note: Numbers assigned to equipment or cables on this diagram correspond to the list in "3.1 Equipment(s) used" and "3.2 Cable(s) used".

[AC Power Line Conducted Emission Test]

 : Connector

Note: Numbers assigned to equipment or cables on this diagram correspond to the list in "3.1 Equipment(s) used" and "3.2 Cable(s) used".

## 4. 20dB Bandwidth

### 4.1 Measurement procedure [FCC 15.247(a)(1)]

The bandwidth at 20dB down from the highest inband spectral density is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- RBW=30kHz, VBW=100kHz, Span=3MHz, Sweep=auto, Detector=Peak, Trace mode=Max hold

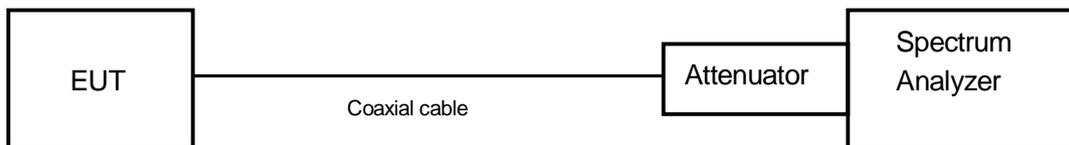

The EUT was set to operate with following conditions.

- No hopping [Channel Low: 2402MHz, Channel Middle: 2441MHz, Channel High: 2480MHz]

The test mode of EUT is as follows.

- Tx mode

- Test configuration

## 5. Carrier Frequency Separation

### 5.1 Measurement procedure [FCC 15.247(a)(1)]

The adjacent channel interval is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- RBW=30kHz, VBW=30kHz, Span=3MHz, Sweep=auto, Detector=Peak, Trace mode=Max hold

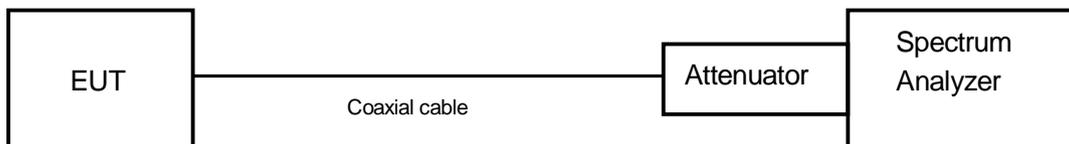

The EUT was set to operate with following conditions.

- Hopping [Channel Middle: 2441MHz]

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 5.2 Limit

System shall have hopping channel carrier frequencies separated by a minimum of; 25kHz or two-thirds of the 20dB bandwidth of the hopping channel, whichever is greater.

### 5.3 Measurement result

## 6. Number of Hopping Frequencies

### 6.1 Measurement procedure [FCC 15.247(a)(1)(iii)]

The number of hopping channels is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- RBW=510kHz, VBW=510kHz, Span=Arbitrary setting, Sweep=auto, Detector=Peak,  
Trace mode=Max hold

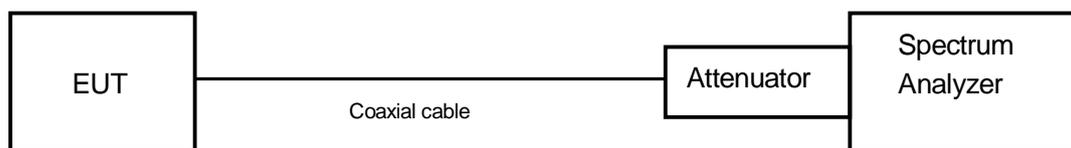

The EUT was set to operate with following conditions.

- Hopping

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 6.2 Limit

Shall have more than 15 channels.

### 6.3 Measurement result

## 7. Time of Occupancy (Dwell Time)

### 7.1 Measurement procedure [FCC 15.247(a)(1)(iii)]

The time occupancy of hopping channel is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- RBW=1MHz, VBW=1MHz, Span=0Hz, Sweep=5ms, Detector=Peak, Trace mode=Single

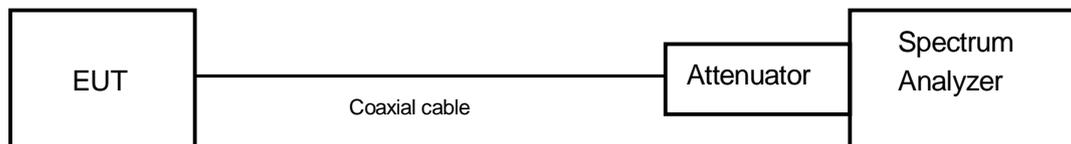

The EUT was set to operate with following conditions.

- Hopping

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 7.2 Limit

The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed.

### 7.3 Measurement result

Date : Oct. 7, 2013  
 Temperature : 26.0 [°C]

|---------|-----------------|-------------|-----------------|------------------------------------|-------|--------|
| Low     | 2411            | DH5         | 2.885           | 0.154                              | <0.4s | PASS   |
|         |                 | 3-DH5       | 2.890           | 0.154                              | <0.4s | PASS   |
| Middle  | 2440            | DH5         | 2.885           | 0.154                              | <0.4s | PASS   |
|         |                 | 3-DH5       | 2.885           | 0.154                              | <0.4s | PASS   |
| High    | 2470            | DH5         | 2.880           | 0.154                              | <0.4s | PASS   |
|         |                 | 3-DH5       | 2.885           | 0.154                              | <0.4s | PASS   |

## FHSS mode

$$\text{DH5/3-DH5} = \text{Dwell time (ms)} \times 1600 / 6 / 79 \times 31.6$$

## AFH mode

$$\text{DH5/3-DH5} = \text{Dwell time (ms)} \times 800 / 6 / 20 \times 8$$

The hopping rates of Bluetooth devices change with different types of payload. The longer the payload is, the slower the hopping rate. The hopping rate scenario is defined in Bluetooth core specification.

Calculation:

$$\text{Occupancy time of 31.6 seconds}^* = \text{time domain slot length} \times \text{hop rate} / \text{number of hopper channel} / 79 / \times 31.6$$

$$\text{Ex.) for Channel Middle, DH5} = 2.900\text{ms} \times 1600 / 6 / 79 \times 31.6 = 309\text{ms}$$

## 8. Maximum Peak Output Power

### 8.1 Measurement procedure [FCC 15.247(b)(1)]

The peak power is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

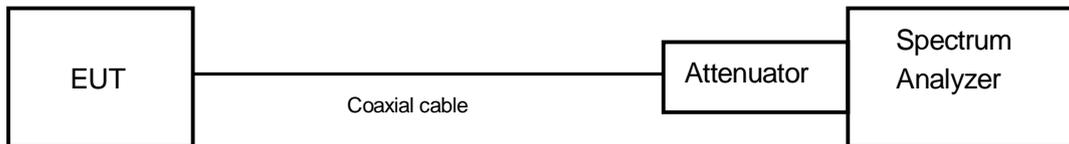

- RBW=3MHz, VBW=3MHz, Span=10MHz, Sweep=auto, Detector=Peak, Trace mode=Max hold  
The EUT was set to operate with following conditions.

- No hopping [Channel Low: 2402MHz, Channel Middle: 2441MHz, Channel High: 2480MHz]

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 8.2 Limit

0.125 W or less

### 8.3 Measurement result

Date : Oct. 8, 2013

Temperature : 24.0 [°C]

Humidity : 64.0 [%]

Test place : Shielded room

## 9. Band Edge Compliance of RF Conducted Emissions

### 9.1 Measurement procedure [FCC 15.247(d)]

The Band Edge is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- RBW=100kHz, VBW=100kHz, Span=Arbitrary setting, Sweep=auto, Detector=Peak, Trace mode=Max hold

The EUT was set to operate with following conditions.

- No hopping [Channel Low: 2402MHz, Channel High: 2480MHz]
- Hopping

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 9.2 Limit

In any 100kHz bandwidth outside the frequency band the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power.

### 9.3 Measurement result

Date : Oct. 7, 2013

Temperature : 26.0 [°C]

Humidity : 58.0 [%]

Test place : Shielded room

Test engineer :

Chiaki Kanno

## 10. Spurious emissions - Conducted -

### 10.1 Measurement procedure [FCC 15.247(d)]

The spurious emissions (Conducted) are measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- RBW=100kHz, VBW=300kHz, Span=Arbitrary setting, Sweep=auto, Detector=Peak, Trace mode=Max hold

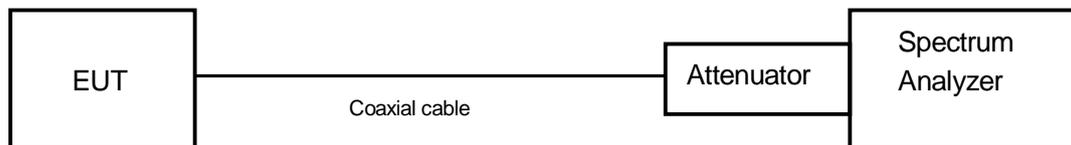

The EUT was set to operate with following conditions.

- No hopping [Channel Low: 2402MHz, Channel Middle: 2441MHz, Channel High: 2480MHz]

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 10.2 Limit

In any 100kHz bandwidth outside the frequency band the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power.

Radiated emission measurements are performed at 3m distance with the broadband antenna (Loop antenna, Biconical antenna, Log periodic antenna and Double ridged guide antenna). The antenna is positioned both the horizontal and vertical planes of polarization and height is varied 1m to 4m and stopped at height producing the maximum emission. As for the Loop antenna, it is positioned with its plane vertical, and the center of the Loop antenna is 1m above the ground plane.

The EUT is Placed on a turntable, which is 0.8m above ground plane. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level. The test results represent the worst case emission for each emission with manipulating the EUT, support equipment, interconnecting cables and varying the mode of operation. Sufficient time for the EUT, support equipment, and test equipment are allowed in order for them to warm up to their normal operating condition.

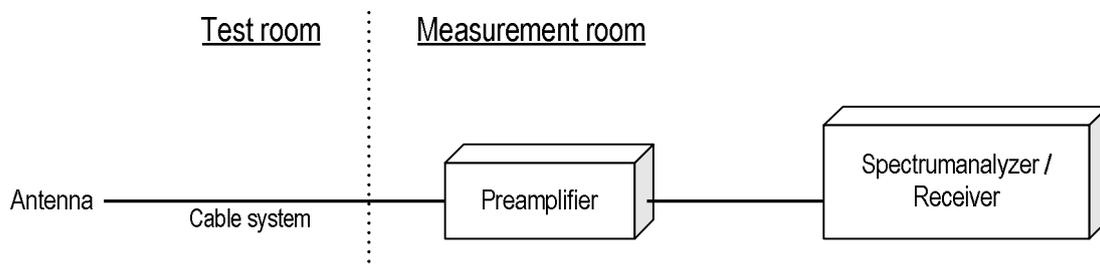

The EUT was set to operate with following conditions.

- No hopping [Channel Low: 2402MHz, Channel Middle: 2441MHz, Channel High: 2480MHz]

The test mode of EUT is as follows.

- Tx mode, Rx mode

- Test configuration

## 11.2 Calculation method

[9kHz to 150kHz]

Emission level = Reading + (Ant. factor + Cable system loss)

Margin = Limit – Emission level

[150kHz to 25GHz]

Emission level = Reading + (Ant. factor + Cable system loss – Amp. Gain)

Margin = Limit – Emission level

## 11.3 Limit

| Frequency<br>[MHz] | Field strength  |               | Distance<br>[m] |
|--------------------|-----------------|---------------|-----------------|
|                    | [uV/m]          | [dBuV/m]      |                 |
| 0.009-0.490        | 2400 / F [kHz]  | 20logE [uV/m] | 300             |
| 0.490-1.705        | 24000 / F [kHz] | 20logE [uV/m] | 30              |
| 1.705-30           | 30              | 29.5          | 30              |
| 30-88              | 100             | 40.0          | 3               |
| 88-216             | 150             | 43.5          | 3               |
| 216-960            | 200             | 46.0          | 3               |
| Above 960          | 300             | 54.0          | 3               |

Note:

1. The lower limit shall apply at the transition frequencies.
2. Emission level [dBuV/m] = 20log Emission [uV/m]
3. As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition modulation.

## 12. Restricted Band of Operation

### 12.1 Measurement procedure [FCC 247(d), 15,205, 15.209]

Test was applied by following conditions.

Test method : ANSI C63.4  
 Test place : 3m Semi-anechoic chamber  
 EUT was placed on : FRP table / (W)2.0m × (D)1.0m × (H)0.8m  
 Antenna distance : 3m

Spectrum analyzer setting  
 - Peak : RBW=1MHz, VBW=1MHz, Span=Arbitrary setting, Sweep=auto  
 - Average : RBW=1MHz, VBW=10Hz, Span=Arbitrary setting, Sweep=auto  
 Display mode=Linear

Radiated emission measurements are performed at 3m distance with the broadband antenna (Double ridged guide antenna). The antenna is positioned both the horizontal and vertical planes of polarization and height is varied 1m to 4m and stopped at height producing the maximum emission.

The EUT is Placed on a turntable, which is 0.8m above ground plane. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level. The test results represent the worst case emission for each emission with manipulating the EUT, support equipment, interconnecting cables and varying the mode of operation. Sufficient time for the EUT, support equipment, and test equipment are allowed in order for them to warm up to their normal operating condition.

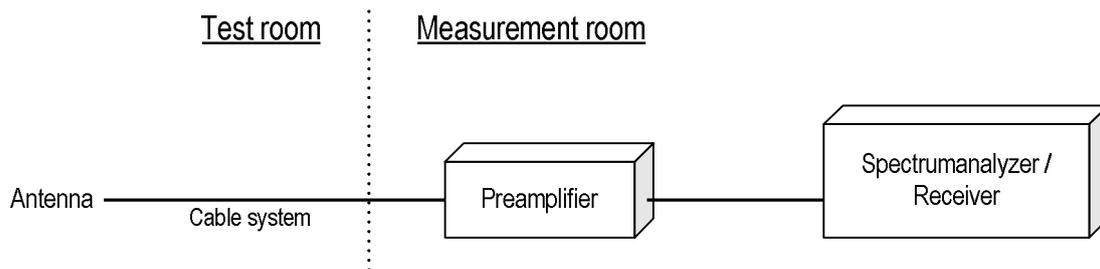

The EUT was set to operate with following conditions.

- No hopping [Channel Low: 2402MHz, Channel High: 2480MHz]

The test mode of EUT is as follows.

- Tx mode

- Test configuration

### 12.2 Limit

Emission at the boundary of the restricted band provided by 15.205 shall be lower than 15.209 limit.

### 12.3 Measurement Result

| Channel | Frequency [MHz] | Results Chart      | Result |

## 13. AC Power Line Conducted Emissions

### 13.1 Measurement procedure [FCC 15.207]

Test was applied by following conditions.

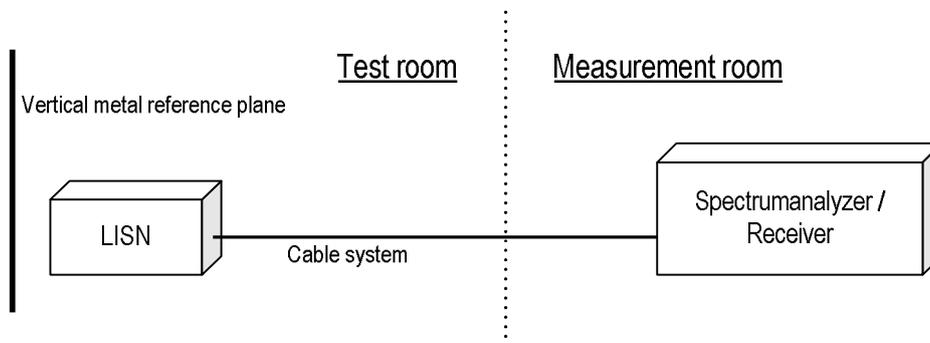

|                                |   |
|--------------------------------|---|
| Test method                    | : ANSI C63.4                              |
| Frequency range                | : 0.15MHz to 30MHz                        |
| Test place                     | : 3m Semi-anechoic chamber                |
| EUT was placed on              | : FRP table / (W)2.0m x (D)1.0m x (H)0.8m |
| Vertical Metal Reference Plane | : (W)2.0m x (H)2.0m 0.4m away from EUT    |
| Test receiver setting          |   |
| - Detector                     | : Quasi-peak, Average                     |
| - Bandwidth                    | : 9kHz                                    |

EUT and peripherals are connected to 50Ω/50μH Line Impedance Stabilization Network (LISN) which are connected to reference ground plane, and are placed 80cm away from EUT. Excess of AC power cable is bundled in center.

LISN for peripheral is terminated in 50Ω.

EUT operating mode is selected to emit the maximum noise. Overall frequency range is investigated with spectrum analyzer using peak detector. Maximum emission configuration is determined by manipulating the EUT, peripherals, interconnecting cables. Then, emission measurements are performed with test receiver in above setting to each current-carrying conductor of the mains port. Sufficient time for EUT, peripherals and test equipment is provided in order for them to warm up to their normal operating condition. If the average limit is met when using a quasi-peak detector receiver, the EUT shall be deemed to meet both limits.

- Test configuration

### 13.2 Calculation method

Emission level = Reading + (LISN. factor + Cable system loss)

Margin = Limit – Emission level

### 13.3 Limit

| Frequency [MHz] | Limit     |           |
|-----------------|-----------|-----------|
|                 | QP [dBuV] | AV [dBuV] |
| 0.15-0.5        | 66-56*    | 56-46*    |
| 0.5-5           | 56        | 46        |
| 5-30            | 60        | 50        |

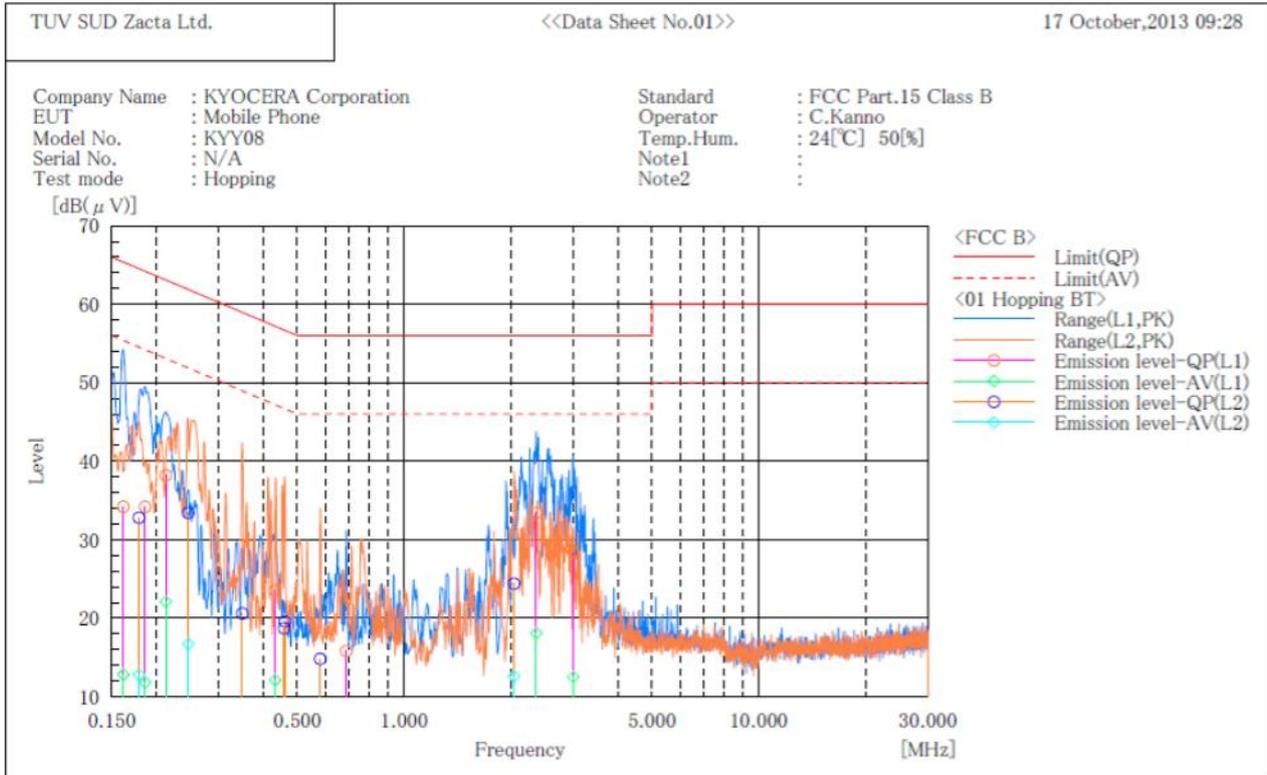

\*: The limit decreases linearly with the logarithm of the frequency in the range 0.15MHz to 0.5MHz.

Zacta

## **14. Antenna requirement**

---

According to FCC section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

The antenna is a special antenna mounted inside of the EUT. Therefore, the EUT complies with the antenna requirement of FCC section 15.203.

## 15. Uncertainty of measurement

---

Expanded uncertainties stated are calculated with a coverage Factor  $k=2$ .

Please note that these results are not taken into account when determining compliance or non-compliance with test result.

| Test item                           | Measurement uncertainty |
|-------------------------------------|-------------------------|
| Conducted emission at mains port    | $\pm 3.0\text{dB}$      |
| Radiated emission (9kHz – 30MHz)    | $\pm 4.4\text{dB}$      |
| Radiated emission (30MHz – 1000MHz) | $\pm 4.5\text{dB}$      |
| Radiated emission (1000MHz – 26GHz) | $\pm 3.9\text{dB}$      |

## 16. Laboratory description

### 1. Location:

TÜV SÜD Zacta Ltd. Yonezawa Testing Center
