Setting Up the Keyboard or Wireless Desktop

- 1. Make sure that your computer is turned off.
- 2. Connecting the Receiver's Keyboard Cable:
  - (a) When connecting to an IBM AT keyboard port, use the 5-pin DIN connector already attached to the keyboard cable.
  - (b) When connecting to a PS/2-style, 6-pin DIN keyboard port, remove the AT adapter.
  - (c) Connect the receiver's purple keyboard cable to the computer's keyboard port.
- Place the receiver eight inches (20 centimeters) from any electromechanical device.

## Installing the Keyboard SoftwareiKeyWorksOffice

Before you can take advantage of the many features

your keyboard offers, you must install the driver.

The driver is in the installation diskette that came

packaged with your mouse and keyboard

Windows 95/98/Me/2000/NT4.0 installation

Insert the installation diskette into your floppy disk drive.

Click the Start button and then click Run.

In the **Run** dialog window, type **A:\setup**, where "A" is the letter of your floppy disk drive.

CH1

Click **OK** and follow the instructions on your screen to complete the installation.

### Selecting the Frequency Channel

The Wireless keyboard operates on two frequency channels..

Refer to the following to change the frequency channel for your

keyboard: Set the frequency channel on the receiver to 1 or 2. Set

the frequency channel on the keyboard to  ${\bf 1}$  or

## The Wireless keyboard ID code

Each keyboard is assigned a unique ID code at manufacture, so the receiver only picks up the signal from your mouse and prevents other Wireless keyboard radio signals from operating on your computer. This feature can also be disabled, allowing other Wireless pointing devices to operate your computer.

2.

CH2

#### Connecting the Wireless Keyboard ID Code

Manually establish communication between the receiver and keyboard.

(a) Press any key from the keyboard

(b) Press the ID Connect button on the receiver the green LED light
